It currently consists of 39 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (16-JAN-2000) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA on Jul 13, 2000 this sequence version replaced 91:6705871.

All repeats were identified using RepeatMasker:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          * NOTE: This record contains 73 individual
* sequencing reads that have not been assembled into
* cortigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Center: Whitehead Institute/ MIT Center for Genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Smir, A.F.A. & Green, P. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    http://ftp.genome.washington.edu/RM/RepeatMasker.html

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This record contains 92 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene rich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that

Novel isolated human large ATP-binding cassette transporter 1 promoter capable of directing transcription of heterologous coding sequence positioned downstream to it, useful for expressing foreign DNA in host

```
The invention relates to an isolated human large ATP-binding cassette transporter 1 (ABC1) promoter capable of directing transcription of betachogous coding sequence positioned downstream to it. The ABC1 promoter is useful for expressing foreign DNA in a host cell, by introducing into the host cell a gene transfer vector comprising the introducing into the host cell a gene transfer vector comprising the promoter operably linked to a foreign DNA encoding a desired polypeptide or RNA, where the foreign DNA is expressed. The gene transfer can be introduced into the host cell by adenovirus infection, liposome-mediated transfer condes and expresses a reporter molecule. The method transfer vector encodes and expresses a reporter molecule. The method further involves introducing into the cell a gene transfer vector comprising a cucleic acid segment encoding a transactivator protein capable of upregulating the ABC1 promoter, or contacting the cell with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the transactivator protein, or an agonist of the transactivator protein. Modulators of human ABC1 gene expression are useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             atherosclerosis. The present sequence represents the hABC1 promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1197 BP; 284 A; 314 C; 328 G; 271 T; 0 other;

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (AIP) binding cassette protein (ABC) 1 gene. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipcprotein-mediated mobilisation of intracellular colosterol stores. ABC1 is defective in Tangier disease, a genetic disease, a constitution of intracellular diseaser about a protein and society of abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9d22-9g31. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of and atheroscierosis. The genes associated with hypercholesteroleming assays and atheroscierosis the genes are useful for developing screening assays the screen of the correct to screen for compounds that regulate the expression of genes associate with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.

The present sequence represents the 5' finaking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) 1 gene. ABCI resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivoral protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tangler disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9q22-9q31. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful for are also useful for an elso useful as diagnostic indicators of cardiovascular disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Adenosine triphosphate (ATP) binding cassette protein (ABC) l
polynucleotides and polypeptides, useful for treatment of heart disease
and other disorders associated with hypercholesterolemia and
of the human ABC1 gene.
                                                                                                                                                                                                                                                                                                                              Human; adenosine triphosphate binding cassette protein 1; ABC1; poblipoprorein-mediated mobilisation; cholesterol; Tangier disease; chromosome 9422-9431; heart disease; hypercholesterolemia; atherosclerosis; cholesterol transport; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1643 BP; 370 A; 413 C; 457 G; 403 T; 0 other;

The invention relates a nucleic acid which is capable of regulating the transcription of human ATT-binding cassette 1 (ABC1) gene, which is a casual gene for pathologies linked to a dysfunctioning of cholesterol metabolism, including diseases such as atherosclerosis. Polynucleotides of the invention are used to screen candidate molecules or substances that are capable of modulating the transcription of the ABC1 gene. They are used in antisense therapy. Compositions comprising sequences of the invention are used to treat hypercholesteroleamia and atherosclerosis. The present sequence is human ABC1 transcription regulating DNA.
                                                               Isolated nucleic acid useful for modifying the ATP-binding cassette {\bf 1} (ABC1) and screening for candidate modulatory compounds or substances
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CCGCGCGCTCTTAGGCCGGGCGCGCGGGGGGAAGGGGGACGCAGACGGGGACCCCTAA 120

triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR or EXR*mediated transcriptional activity or ABC1 expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition lower than normal EDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.

No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAS derived from 30 different tissues EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                            expressed sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          403 GACCCGCAGAGCCGACCCTTCTCCCGGGCTGCGGCAGGGCAGGGCGGGGAGCT 462

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to four common polymcrphisms in the gene encoding dargesette transporter-I (ABCI). ABCI is associated with decreased ApoA-I mediated efflux of cholesterol. The polymcrphisms in ABCI directly affects cellular lipid homeostasis, which is a key factor in the atherogenetic processes. The ABCI polymcrphisms are useful for diagnosing and treating lipid disorders, cardiovascular diseases (coronary heart disease, atherosclerosis) and inflammatory diseases transporter for interleckin-ibeta (IL-lbeta) identification of ABCI as a candidate for treatment of inflammatory diseases including rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                366 AAACCCCGTAATTGCGAGCGAGCGAGTGAGTGGGGCCGGGACCCGCAGCCGAGCCGACCC 425

The present sequence is that of cDNA encoding the human adenosine triphosphate (ATP) binding cassette transporter 1 (ABC1) protein (see AAM50227). The sequence includes an extended open reading frame (ORF) to that provided by the sequence in AAT70314, using an alternative ATG codon as initiation codon and thereby adding an extra 40 N-terminal amino acids to the encoded ABC1 protein (see AAM50228). The invention provides 4 common polymorphisms in the ABC1 gene. These were identified by sequencing the ABC1 gene in different Tangier kindreds. In the variant genes (unmbering as in AAT70314), G is changed to A at position 596, T is changed to C at position 1356, A is changed to G at position 1356, or any combination of these. All of these collymorphisms alter the amino acid sequence of ABC1 and therefore may affect its function. The 2 most common polymorphisms (G596A) and A2589G) are both associated with a decreased in vitro ApoA-1 mediated efflux of cholesterol from monocuclear phagocytes, a catalished coronary heart disease. 3 of the variants (G596A, A2589G and G3456C) are significantly increased in a population of mediated efflux of the angels (G596A) are significantly increased in a population of established coronary heart disease. (ED) relative to CHD-free control subjects. The use of the provided ABC1 polymorphisms for the diagnosis and treatment of lipid disorders, cardiovascular current and infimammatory diseases (e.g. psoriasis, lupus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /*tag= b

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates a nucleic acid which is capable of regulating the transcription of human APP-bidding cassette 1 (ABC1) gane, which is a casual gene for pathologies linked to a dysfunctioning of cholesterol metabolism, including diseases such as atherosclerosis. Polynucleotides of the invention are used to screen candidate molecules or substances that are capable of modulating the transcription of the ABC1 gane. They
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              y. Compositions comprising sequences of the hypercholesterolaemia and atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated nucleic acid useful for modifying the ATP-binding cassette 1 (ABC1) and screening for candidate modulatory compounds or substances \,

The present invention describes primer sets for synthesising 5602

(11.1ength cDNAs defined in the specification. Where a primer set

(21.1ength cDNAs defined in the specification. Where a primer set

(22. comprises: (a) an oligon-dry primer and an oligonuclectide comprises one of

(23. comprises at least 15 incleotides promprises one of

(24. comprises at least 15 incleotides; or (b) a combination

(25. comprises at least 15 incleotides; or (b) a combination

(26. da oligonucleotide comprises at least 15 incleotides; or (b) a combination

(27. complementary strand of a polynucleotide which comprises a 5'-end

(28. sequence and an oligonucleotide comprising a sequence complementary to the

(29. complementary strand of a polynucleotide which comprises a 3'-end sequence, where the complementary to

(20. principation and primer sets and lossed in antisense therapy and

(37. end sequence/3'-end sequence is selected from those defined in

(38. comprises at least 15 nucleotides and the combination of

(49. comprises at least 15 nucleotides and the combination of

(50. complementary). The primers are useful for synthesising polynucleotides,

(50. particularly full-length cDNAs. The primers are also useful for the

(50. detection and/or diagonosis of the abnormality of the proteins encoded by

(50. connas easily without any specialised methods AAB03166 to AAB13628 and

(50. AAB95893 represent human amino acid sequences; and AAB13629 to AAB13632

(50. content oligonucleotides, all of which are used in the exemplification

(50. content invention.
                                                                                                                                                                                                                                                                                                                                          primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes primer sets for synthesising 5602

[11] Interpret cDNAS defined in the specification. Where a primer set

[12] Comprises: (a) an oligo-of primer and an oligonucleotide complementary

[13] Comprises: (b) an oligonaction which comprises one of

[14] Comprises at least 15 nucleotide which comprises one of

[15] Complementary strand of a polynucleotide which complementary to the

[16] Complementary strand of a polynucleotide which comprises a 5'-end

[17] Sequence and an oligonucleotide comprises a 5'-end

[18] Sequence and an oligonucleotide comprises a 5'-end

[19] Sequence and an oligonucleotide comprises a 5'-end

[20] Sequence and an oligonucleotide comprises a 5'-end

[21] Sequence and an oligonucleotide comprises a 5'-end

[22] Sequence and an oligonucleotide comprises a 5'-end

[23] Sequence and an oligonucleotide comprises a 5'-end

[24] Sequence and an oligonucleotide comprises a 5'-end

[25] Sequence and an oligonucleotide comprises a 5'-end

[26] Sequence and an oligonucleotide comprises and the complementary to a

[26] Sequence and an oligonucleotide comprises and the complementary to a

[27] Sequence and an oligonucleotide comprises and the complementary to a

[27] Sequence and an oligonucleotide comprises and the complementary to a

[28] Sequence and an oligonucleotide comprises and the complementary to a

[28] Sequence and an oligonucleotide comprises and the complementary to a

[28] Sequence and an oligonucleotide comprises and the complementary to a

[28] Sequence and an oligonucleotide comprises and the complementary to a

[29] Sequence and an oligonucleotide complementary to a

[20] Sequence and an oligonucleotide and the comple

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polyuucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the oligonucleotide which comprises a 1'-end sequence. Where the oligonucleotide which comprises a 1'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the
                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; primer: detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligo-nucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03165 to AAH13628 and AAH13633 to AAH18742 represent human cDNAs aguences; AAB92446 to AAH3893 represent human amino acid sequences, and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy and primer sets can be used in antisense therapy and particularly full-length coNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length coNAs. The primers allow obtaining of the full-length coNAs. The primers allow obtaining of the full-length coNAs of the proteins encoded by the full-length coNAs. The primers allow obtaining of the full-length coNAs casily without any specialised methods. AAH0316 to AAH18628 and AAH18633 to AAH18628 con AAB95893 represent human coNA sequences; AAB92446 to

```

```
The invention relates to polynuclectides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAW80302) that exhibit activity elating to excoded polypeptides (AAM78323-AAW80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The prolypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, cell growth factor activity, haematopoliesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, individual in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.

Content Records for SEO ID NO 2110 (AAK52561), 2111 (AAK52582) and 3566 (AAM80020) are omitted as the relevant pages from the sequence listing was activity and activity activity activity and activity activity activity activity and activity activity activity and activity activity activity and activity

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

KESULI I	
HSA252201	
TOCUS	HSA252201 1167 bp DNA linear PRI 10-APR-2001
DEFINITION	Homo sapiens partial ABC-1 gene for ATP-binding cassette
	transporter-1, 5'UTR and promoter region.
ACCESSION	AJ252201
VERSION	AJ252201.1 GI:12053757
KEYWORDS	ABC-1 gene, ATP-binding cassette transporter-1; promoter.
SOURCE	human.
ORGANISM	Homo sapiens
	Eukaryota; Merazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
	Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE	1 (bases 1 to 1167)
AUTHORS	Porsch-Ozcurumez, M., Langmann, T., Heimerl, S., Borsukova, H.,
	Kaminski, W.E., Drobnik, W., Honer, C., Schumacher, C. and Schmitz, G.

Diffect submission.

Diffect submission.

Cambridgeshire, CB10 18A, UK. E-mail enquiries:

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alterrate chemistry or covered by high quality data (i.e., phred quality >- 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MIS subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given surface the Equire table with their source databases: Em; EMBL; SW;

SWISSPROT; Tr., TREMBL; Wp; WORMPEP; Information on the WORMPEP database can be found at the subcondition of the worm of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   IMPORTANT: This sequence is not the entire insert of clone RP11-21.787 It may be shorter because we sequence overlapping sections only once, except for a short overlap.

The true right end of clone RP11-21787 is at 96717 in this sequence. The true left end of clone RP11-127810 is at 72980 in this sequence. The true right end of clone RP11-32710 is at 2000 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9. constructed by the Sanger Centre Caromosome 9 Mapping Group.  sapiens clone RP11-1N10, LOW-PASS SEQUENCE SAMPLING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is usefu. for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Zimmer.A. and Zody,M.
Direct Submission
Submitted (16-JAN-2000) Whitehead Institute/MIT Center for Genome
Research, 320 Charles Street, Cambridge, MA 92141, USA
On Jul 13, 2000 this sequence version replaced g1:6705871.
All repeats were identified using RepeatMasker:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Center: Whitehead Institute/ MIT Center for Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  arbitrary. Low pass sequence sampling is completely identifying clones that may be gene-fich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Smit, A.F.A. & Green, P.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Contact: sequence_submissions@genome.wi.mit.edu
